

General rush to balance
towards maximum entropy

MECHANICS
First kind:
FALL

PHYSICS
ATOMIZATION:
Second kind

Exception deviation from
equilibrium

First kind:
CLINAMEN
MECHANICS

AGGREGATION:
Second kind:
PHYSICS

The universal law of the rush to equilibrium is double. If it is the fall of heavy bodies, it is mechanics, if it is automation, it is physics. The fall is the mechanical equivalent of atomisation, and it is more simple. It says, in pure movement, what dissemination says in matter. Now, if something exists, this is because aggregation takes place, physically speaking, by and in matter. There is an exception to the general rule of irreversible atomisation. Hence its mechanical equivalent, simpler in pure movement: the *clinamen*, as a local deviation from equilibrium.
